

Sustainable Procurement Masterclass

**A custom-designed workshop
brought to you by:**

Would you like to gain the practical skills and tools needed to increase competitive advantage and reduce costs and environmental impact in your organisation?

Then MJC's Sustainable Procurement Masterclass is for you!

What's it all about?

The aim of procurement is to deliver value for money. The aim of green procurement is to deliver value for money AND value for the environment. The principles of green procurement are being mandated by corporations at all levels and at each tier of government, as part of standard operating procedures around Australia.

Green procurement is a set of tools applied to your current procurement process to ensure your organisation can buy products and services in a sustainable manner.

Why is it important?

An organisation which has an effective green procurement system can take advantage of cost-savings through buying smarter, achieve compliance with current and proposed procurement legislation (especially government procurement standards) and achieve recognition for sustainable business practices.

At the same time, green procurement enables you to reduce your company's environmental footprint and strengthen relationships with staff, suppliers and customers.

What are we offering?

We propose to help you not get bogged down with complex technical details and jargon and to focus on achieving the desired outcomes of value for money and the environment through the purchasing decisions you make.

MJC's Sustainable Procurement Masterclass includes an interactive workshop that can be tailored to meet your team's requirements i.e. from 4hours to a full day. The workshop delivery is preceded by a 2 hour workshop with the company representative to map your procurement practices and identify any key opportunities that can be further developed through the workshop.

The workshop covers the following key topics, illustrated by worked examples and case studies:

- What is business sustainability?
 - What is driving the business sustainability agenda?
 - Why it is important to business - small and large
 - How business can best respond
- What is green procurement?
 - An overview of current State green procurement objectives
 - Green labelling
 - Best practice in procurement and how "green" fits in
- How to implement a green procurement process
 - The challenges to implementing green procurement AND how to overcome them
- How to respond to customers green procurement objectives

Take the time to learn about green procurement and you won't ever be de-railed again by suppliers with greenwash slogans. Don't let confusion ruin your genuine efforts to develop and maintain sustainable purchasing in your organisation.

Who should attend:

- Procurement officers
- Logistics, sales and warehousing managers
- CFO's
- Project Directors
- Sustainability champions

All participants receive a FREE toolkit including an innovative program to assess your current sustainability practices and identify potential cost savings.

A Green Purchasing Guidelines Template will also be provided.

What does it cost?

As a guide, a half-day customised workshop is \$5,000 excl GST for 10 participants (Cost increases for additional participants, additional content and where a venue and catering must be provided) .
